FIRST SHIFT

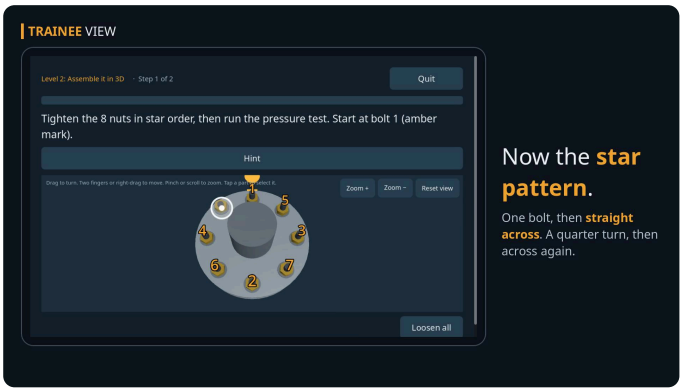

Practise the job before you touch the line.

Game-like training modules for manufacturing, from NOTHOW Game Studio, Bengaluru

New operators mostly learn on the line from whoever is free, and the mistakes they make while learning turn into scrap and rework. We turn a station's SOP into short levels they play on a training-room tablet first, so they can get a step wrong and see why before it costs you anything.

Short levels from warm-up to final check, with stars and a Line-ready badge.

A 3D level. Tighten in the wrong order and the flange leaks on the pressure test.

WHAT THE OPERATOR DOES

- Taps through the real steps in the right order
- Picks the right part or tool, mostly from pictures
- Spots defects and decides whether to accept, rework or escalate
- Takes a check before and after, so progress shows

WHAT THE PLANT GETS

- A record of who trained, when and how they scored, exported as a CSV
- Your procedure, photos, logo, pass mark and target time
- Delivery on the tablet or PC you already have, with no headset

THREE WAYS TO WORK WITH US

Option	What you get	Delivery
Quick SOP module Start here	One procedure of up to 10 steps, using your photos on our templates: sequence, right part or tool, spot the defect, before and after quiz. Two languages from English, Kannada and Hindi. Web and Android tablet, with a results CSV.	2 weeks
Shop-floor custom	One procedure as a 3D playable with a 60 to 90 second video, in two languages, on web and Android, with results on the device.	5 to 6 weeks
LMS custom	All of the above, plus SCORM 1.2, video in 16:9 and 9:16, and a results report.	5 to 6 weeks

Every job has a fixed scope and a fixed price, quoted per procedure. Early clients can get pilot pricing in exchange for a case study, named or anonymised.

WHAT WE NEED FROM YOU

- Time from someone who knows the station
- Your photos, or access to take them
- A named approver, who signs off the module before anyone trains on it
- An NDA, if you need one, signed before we start

YOUR DATA

Results stay on your device or LMS. No worker personal data is sent to us unless you ask for that in writing.

A peer-reviewed meta-analysis of 65 studies found simulation-game trainees retained more procedural knowledge than comparison groups (Sitzmann, 2011).

Which station takes a new operator longest to learn? Send us that one.
